EDUCATION

McGill University, Montreal, QC

September 2024 – May 2028 (Expected)

Bachelor of Engineering in Software Engineering, Co-op, Minor in Mathematics

- *Coursework:* Computer Organization, Signals & Networks, Data Structures & Algorithms, OOP Design, Real Analysis. W27: Computer Architecture, Compiler Design

PROJECTS

Gabl | *Interpreted Language in C* | alygaber0.github.io/Gabl

May 2026 – August 2026

- Built an interpreted language in C with no parsing libraries: hand-written lexer with a recursive descent parser encoding operator precedence as tree depth, and a tree-walking AST evaluator
- Represented runtime values as a tagged union, redesigning its layout when strings and arrays were added as composite types
- Implemented lexically scoped environments with parent-chain lookup, isolating state across recursive and nested calls; desugared for loops in the parser
- Traced a pointer-truncation segfault and a scope leak between nested calls; added a test suite, Makefile build, and documentation site

Coursework Projects

2025 – Present

- *Networks:* Implemented a record protocol over TCP sockets in Python: length-prefixed frames with CRC-32 validation, loops handling partial writes and short reads, and a DATA/ACK/CLOSE state machine
- *Software Design:* Led a seven-person team building a retail platform in Java and Spring Boot on a layered architecture (model, repository, service, controller, DTO), with a Vue.js frontend and separate access for customer, employee, and manager roles
- *Computer organization:* Built a working CPU in Logisim-Evolution: datapath, control for a small instruction set
- *Digital logic:* Designed combinational and sequential VHDL circuits (adders, clock divider, Moore FSM sequence detector), verified in ModelSim and synthesized to a DE1-SoC FPGA in Quartus, optimizing for critical-path delay

EXPERIENCE

Vexo Labs Inc. (fintech), Remote

January 2026 – April 2026

Software Engineering Intern

Tech Stack: Next.js, Node.js, TypeScript, React, Tailwind CSS, Supabase, PostgreSQL

- Built four customer-facing pages end to end at an early-stage fintech
- Shipped a live market dashboard: real-time prices across a broad ticker list, daily top three gainers and losers
- Wrote the queries behind each view against the team's database schema

Darwinz AI (TheDar.AI), Cairo, EG

May 2025 – July 2025

Software Engineering Intern

Tech Stack: Python, Flask, Docker, GCP (Cloud Functions, Vertex AI), BigQuery

- Built a document pipeline on GCP running PDFs through OCR, translation, and summarization
- Loaded structured metadata into BigQuery for downstream SQL analysis
- Wrote and deployed containerized Flask REST services on Google Cloud

TECHNICAL SKILLS

Languages: C, C++, Python, Java, SQL, TypeScript, JavaScript, ARM Assembly, VHDL

Tools and Infrastructure: Git, Make, Docker, GCP, PostgreSQL, BigQuery

Web and Frameworks: React, Next.js, Node.js, Spring Boot, Flask, Supabase, REST APIs

EXTRACURRICULARS

McGill Squash Team | Men's B National Champion, undefeated record

September 2024 – Present
