EXPERIENCE

Vexo Labs Inc.

January 2026 – April 2026

Software Engineering Intern

- Engineered production-ready dashboard pages (home, login, signup, market overview) in Next.js and Tailwind CSS, translating designer mockups into pixel-perfect, responsive interfaces with reusable component architecture
- Collaborated directly with the founding team on Supabase backend integration, contributing to database schema decisions and data-fetching patterns across frontend API calls

Darwinz AI (TheDar.AI), Cairo, EG

May 2025 – July 2025

Software Engineering Intern

- Built and deployed maintainable and scalable Flask RESTful APIs on Google Cloud, automating PDF processing with Gemini AI for translation and TTS; improved system reliability through team code reviews
- Built a cloud-native Machine Learning pipeline using Vertex AI, BigQuery, and Cloud Functions automating document ingestion, OCR, translation, summarization, and metadata storage for downstream analysis

EDUCATION

McGill University, Montreal, QC

September 2024 – May 2028 (Expected)

Bachelor of Engineering in Software Engineering, Co-op, Minor in Mathematics

- Relevant Coursework:* Applied Machine Learning, Data Structures & Algorithms, Software Systems

PROJECTS

Gabl – alygaber0.github.io/Gabl

May 2026 - August 2026

- Built a complete language pipeline including a hand-rolled lexer, a recursive descent parser with correct operator precedence, and a tree-walking AST evaluator, with no external parsing libraries
- Implemented core language semantics, including variables, arithmetic, conditionals, for loops, functions, and recursion, using lexically scoped environments with parent-chain lookup for per-call isolation
- Extended the type system with strings, and arrays, redesigning the value representation to support composite types
- Diagnosed and fixed low-level bugs, including a pointer-truncation segfault and scope leakage between nested calls; added a test suite and a Next.js documentation site deployed via GitHub Pages

PlayBook - Squash App

May 2026 - Present

- Co-built a full-stack platform enabling squash club members to book courts and sessions with friends or unmatched members, addressing chronic underutilization of open court time
- Designed a role-based permission system distinguishing members, club managers, and coaches, each with distinct booking and administrative capabilities
- Implemented booking logic to prevent conflicting reservations on shared court resources, built with Next.js and Supabase, including Supabase Auth and a relational schema modeling users, clubs, courts, and sessions

Personal Portfolio

January 2026

- Designed and built a personal portfolio using Next.js, Tailwind CSS, and Framer Motion, with animated transitions and case studies tying projects and coursework to engineering growth, deployed on Vercel

TECHNICAL SKILLS

Languages: JavaScript, HTML, CSS, Python, C, Java, SQL

Technologies: React, Next.js, Tailwind CSS, Supabase, PostgreSQL, Stripe, Clerk, Node.js, REST APIs, Flask, Vertex AI, GCP, Git, Linux

EXTRACURRICULARS

McGill Squash Team

September 2024 – Present

- Men's B National Champion; compete and train 15+ hours/week alongside a full academic workload with an undefeated record
